"ULTRASEAL - OTR" - Tire Sealant

Honorable Ladies and Gentlemen,

after having successfully tested for many months the above mentioned product, which was conducted by a client (scrap metal processor) of one of our distributors, we are pleased to provide you with the source of supply for a cost-effective alternative to tire foaming.

The product "Ultraseal - OTR" is directly injected through the valve into the inside of the tire and it is able to seal cuts, tears and holes in the tread area and on side walls, up to a 12 mm (!) diameter, at speeds of maximum 50 km/h, without air pressure loss.

The product "Ultraseal - OTR" is made available through the company: TTN/Holland, represented by Mr. P. van Gellecum, who will contact you regarding this matter shortly.

With friendly Greetings

F. WEYHAUSEN GMBH & CO. KG
MASCHINENFABRIK

i.A. Fritz Rinne
