## TO WHOM IT MAY CONCERN

After a demonstration given to Nissan South Africa at our Rosslyn Plant by one of Ultra Seals' distributors, it was decided that we would install the product in 20 of our 4X4 vehicles that we were going to use on a cross country trip to South West Africa. The roads that were selected in South West Africa (Kaokoland) were to test the ruggedness of the vehicles. As can be imagined, the off roads conditions were extremely poor over certain stretches. Total distance covered in South West Africa was 1800 km's.

On previous trips to South West Africa we had bad experiences as far as flat tyres were concerned. This time thanks to Ultra Seal we had very few problems. (4 Punctures caused by cuts and thorns penetrating the side walls). The problems we incurred were outside the Ultra Seal Specs. Therefore, Ultra Seal would never have been able to prevent these punctures.

Nissan, South Africa will therefore recommend the product "Ultra Seal" to potential users.
